ENVIRONMENTAL SCIENCE

You have a love of the outdoors. You want to know how major challenges such as global warming, deforestation, and water pollution affect the environment. You’re looking for an interdisciplinary subject that combines knowledge and skills from a variety of different fields. You know that you’re going to be pursuing a four-year degree and are looking for a great stepping stone to get you there. Northampton’s Environmental Science Associate in Science degree program wants you to see that the environment can take you right into an exciting field of growth, and can be customized to prepare you for a range of fields including laboratory sciences, wildlife conservation, resource management, environmental law, human ecology, and more.

WHY IS THIS PROGRAM FOR YOU?

» What is the role of human beings on Earth? It’s a broad question, right? As you work through the curriculum, you’ll find out the answer and see how a number of disciplines come together to give it to you.

» Environmental Science is a program that is starting to see a rise in popularity around the world. An information explosion has occurred that will provide you with opportunities in many facets of the field.

» NCC has articulation agreements with several colleges and universities so that you are assured easy transfer of your credits to the four-year institution you select.
WHAT WILL YOU LEARN?

» What are the functions of living and nonliving systems and the role of humans in the environment? You’ll be able to answer these questions and more as you advance through a curriculum that covers both biology and chemistry.

» Get out of the classroom and get some fresh air! You’ll proficiently function in laboratory and field settings, demonstrating proper field techniques and using modern scientific instrumentation.

» You’ll conduct scientific inquiry and research on environmental topics as those topics relate to science, technology, and society.

WHERE CAN YOU TRANSFER?

» East Stroudsburg University

» Cedar Crest College

» State University of New York-College of Environmental Sciences and Forestry
